Prime Wireless

Introducing Prime Wireless - where service, technology and high-availability meet. Prime Wireless stands as the embodiment of prime itself – the highest quality and paramount choice.

Designed to imitate the characteristics of a reliable fibre service, Prime Wireless can be deployed within extremely short time-frames or even as a redundant solution to minimise the risk of downtime during a potential fibre outage.

Our highly redundant, reliable network is built on carrier-grade CISCO Core equipment and is also backed by the latest Lithium technology to ensure the availability of services during extreme stages of load-shedding. Supercharge your organisation through the power of carrier grade spectrum connectivity and priority support through our world-class 24/7 NOC.

Prime services are designed for organisations that require high SLA's, dedicated throughput and maximum availability. If your organisation requires an unwavering primary or redundant wireless solution, look no further!"
